TITLE Student Data Report. Oklahoma Higher Education 1987-88.
INSTITUTION Oklahoma State Regents for Higher Education, Oklahoma City.
PUB DATE Dec 88
NOTE 101p.; For earlier reports, see ED 256 283 and ED 264 810.
PUB TYPE Statistical Data (110) -- Reports - Descriptive (141)

EDRS PRICE MF01/PC05 Plus Postage.
DESCRIPTORS College Bound Students; College Freshmen; *College Students; Educational Finance; *Enrollment Trends; Full Time Equivalency; Geographic Distribution; *Higher Education; Longitudinal Studies; Private Colleges; Public Colleges; Racial Factors; State Surveys; *Student Characteristics; Student Financial Aid; Transfer Students; Undergraduate Study
IDENTIFIERS *Oklahoma

ABSTRACT

The sixth annual publication of comprehensive student data derived from the Oklahoma State Regents' United Data System is presented. The report provides primary measures of student involvement in higher education in the following seven sections: introduction; movement into college; enrollments; student distribution; student progression; student transfer; and financial aid. In one major respect, this report differs from previous ones of similar nature because its tables and figures are mainly summaries of existing and often vastly comprehensive data reports. Thus, it is not only a self-contained document but an index to sources of comprehensive data that could be useful to state system administrators. Among the important enrollment statistics and trends are the following: females continue a trend and outnumbered males in 1987-88 by a ratio of 53 to 47; public institutions' full-time equivalent enrollments were up 0.7% in 1987-88 over 1986-87; public institutions' fall 1987 headcount enrollments were next to the highest in a decade, exceeded only by fall 1983; the enrollment of nonresident aliens in public institutions continues to decline; Oklahomans comprised 91% of the students in the public sector in fall 1987; loans continued to increase as sources of financial aid dollars in 1986-87 while student employment continued to decline. EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

Among the important enrollment statistics and trends are the following:

- In the fall of 1987 a number equal to 5.1 percent of the state population was in attendance at an Oklahoma institution of higher education. For the full year 1987-88 the number was equal to 7.3 percent of the population.
- One in three Oklahoma high school seniors go to a public college the following year. Two in three Oklahoma high school seniors go to public colleges at some time in their life. When private institutions and out of state attendance are figured in, the figure rises to three in four.
- Total unduplicated headcount for public institutions was up by one-half of one percent in 1987-88 over 1986-87.
- Females continue a trend and outnumbered males in 1987-88 by ratio of 53 to 47.
- Public institutions' fall 1987 headcount enrollments were next to the highest in a decade exceeded only by fall 1983.
- Public institutions' full-time-equivalent enrollments (FTE) were up 0.7 percent in 1987-88 over 1986-87.
- The equivalent of 70 percent of the fall 1987 enrollment increase was due to an increase in minority enrollments. Without the new minority enrollments increase there would have been a much smaller increase in total enrollments in fall 1987.
- The enrollment of Nonresident Aliens in public institutions continues to decline. NRA were down from 6.3 percent of total six years ago to 3.1 percent in fall 1987.
- Oklahomans comprised 91.0 percent of the students in the public sector in fall 1987. Other states accounted for 5.8 percent; other countries for 3.1 percent.
- In 1986-87 in the public institutions better than seven out of ten classified undergraduate students completed their course of study or returned the next year in fall 1987.
- Loans continued to increase as sources of financial aid dollars in 1986-87 while student employment continued to decline.

PROLOGUE

PROLOGUE

How many? The most often asked question about students in higher education is, "How many are enrolled?". Usually across the United States the answer comes in the form of fall semester "enrollments" which correspond more or less with the fall semester "headcount." So long as such a statistic refers to a single institution during one semester such answers are valid, but should you be asking about a system of institutions or for a period of time longer than one semester, then the answer must be more carefully considered.

For example, if you ask for total "enrollment" data for the public institutions in Oklahoma higher education for 1987-88, you could receive any or all of the following answers.

If for some reason you were interested in the number of people who passed through the admissions offices each year, you would want the number of individual enrollments. For 1987-88 that would be 439,301. If on the other hand you are discussing individual human beings then you would want to know the unduplicated student headcount. For 1987-88 that number was 218,389. Then again, maybe you want to measure the amount of time students spent in class or the workload of the institutions. In that case you inquire about the FTE (Full-Time-Equivalent) enrollments. In 1987-88 that would have been 113,633.

Each number is valid and correct; and each refers to the same population of students during the same period of time; yet, each varies greatly from the others. As you utilize this document, use caution that the data you extract is appropriate to your question.

INTRODUCTION

PART I

INTRODUCTION

The Student Data Report for 1987-88 is the sixth annual publication of comprehensive student data derived from the State Regents' Unitized Data System. The Unitized Data System (UDS) has been in place since 1977. Over time it has developed into a highly functional and accurate policy and planning tool. Each semester a minimum of seventy-five discrete data elements are gathered for each and every student in the State System of Higher Education. It is from these "units" of data that the UDS constructs several score of state and federal reports and studies.

This annual report utilizes the UDS to produce many of the primary measures of student involvement in higher education: movement into college, enrollments, student distribution, student transfer and progression, semester-credit-hours, and the like. The series of tables and figures is intended to be factual rather than interpretive. They are intended for use by public officials, institutional administrators, and boards of regents in the development of higher education plans and programs.

In 1987-88 there were twenty-nine data reporting entities in the public Oklahoma State System for Higher Education. Twenty-seven of these reporting entities were institutions of higher education. The University of Oklahoma Health Sciences Center and Oklahoma State University's two technical branches at Oklahoma City and Okmulgee were reported separately. The enrollments for the universities' professional schools were reported with the campus of their location. Beginning with 1987-88 Sayre Junior College is a branch campus of and is reported with Southwestern Oklahoma State University. Students located at the Idabel and Ardmore Higher Education Centers as well as the University Center at Tulsa were reported with their institution of record. Figure 1 shows the location and classification of these reporting public institutions as well as the 18 private institutions located in Oklahoma. Fourteen of the private institutions cooperate in the Unitized Data System and are therefore included in this report. In that two of the private institutions do not report within this system, grand totals including private institutions are not complete.

In one major respect this report differs from previous reports of similar nature. The tables and figures contained herein are, for the most part, summaries of existing and often vastly comprehensive and detailed data reports. Table 18, for example, is a one-page summary of a 2,000-plus page enrollment report by institution, program, race, sex, class level, and full-time/part-time status. Figure 11 is a pictographic summary of a 155-page report on annual undergraduate student progression within each institution and the system by race, sex, and class level. Thus the Student Data Report for 1987-88 is not only a self-contained document but may serve as an index to sources of comprehensive data that could be useful to State System administrators.

Since the Unitized Data System is in a mode of continuous edit, reports generated at different times under different programming may depict slightly different populations even within the same time parameters. If cross comparisons between tables are made, it is recommended that the user check the grand totals as well as table headings and footnotes to ascertain what degree of variance between the two measured populations there may be before making specific comparisons.

Figures 2, 3, and 4 look at Oklahoma's student population as it relates to the nation using the mid-decade census projections. When the percentage of public higher education enrollments was compared to total population, Oklahoma ranked 17th in the nation at that time. Private college enrollments compared in the same way ranked Oklahoma as 34th nationally. When all the institutional enrollments in the state were combined, Oklahoma ranked at the half-way mark or 25th in the nation.

STUDENT INFLOW

PART II

STUDENT INFLOW

Figure 5: Average Annual Movement

This figure is one method of examining the flow of Oklahoma students into higher education from high school. High school seniors are used as a comparative demographic base because the open-admission of some institutions and the admissions waiver policies of others do not necessarily require a high school diploma. An annual average based on a five-year history is used in order to mitigate the effects of any one anomalous year. The combined flow from high school to college the next summer and fall equals 67 percent of the senior class over time. Combined flow is the statistic traditionally cited as the "college-going rate."

Linear flow describes the movement of 17-19 year olds who are high school graduates and who move directly from high school into college. The linear flow is 37 percent on an average, or approximately half the level of equivalent flow.

Analysis.--In the simplest analysis, over time, two out of three Oklahoma high school seniors may go on to college in the public sector. One of the two will go directly to college from high school, and the other will delay entry one or more years. When the private colleges and the spring terms are calculated into the flow, the rates may increase by an estimated 12 to 15 percentage points.

Figure 6: The Gross Equivalent Movement

Figure 6 compares the gross count of first-time-entering freshmen at public institutions in 1987-88 with the number of high school seniors in Oklahoma the year before.

Analysis.--Over the three terms of 1987-88 the public institutions had a total enrollment of 41,579 first-time-entering freshmen. These were freshmen from both Oklahoma and outside Oklahoma. When this number is compared to the number of Oklahoma high school seniors from the year before, it gives a gross equivalent flow of 106

percent. In the aggregate the state serves more first-time-entering freshmen than we had high school seniors the year before. Some of this is due to the changing structure of higher education, especially at the community junior college level. Thus, some of these enrollments are "backlogged" older Oklahoma students, but some of these enrollments are due to educational "load" transferred to Oklahoma by the federal government, in the case of nonresident aliens, and by other states, in the form of out-of-state students.

Table 4: High School Senior Enrollment Ranked by County

This table displays the data in Figure 7 but ranks it numerically by county. Rankings are from the lowest to the highest number.

Figure 7: High School Senior Enrollment by County

This figure displays the annual average high school senior enrollments by county for the five years 1982-83 to 1986-87 in Oklahoma high schools. These enrollments are used as the demographic base from which the flow of first-time freshmen into college is measured.

Figure 8: First-Time Freshmen Enrollments by County

This figure distributes the annual average enrollments of first-time freshmen at public institutions by county.

Table 5: First-Time Freshmen Enrollments by County

This table takes the data in Figure 8 and displays it in rank order by county. Ranking is from the lowest to the highest number.

Table 6: The Contribution by County of College Going High School Seniors

Table 6 shows the "combined flow" of high school seniors into status as first-time-entering freshmen by county of reported origin.

Table 7: Comparison of First-Time Freshmen

Table 7 contains the gross count of first-time-entering freshmen at public institutions for Fall 1986 and 1987 as well as for the full academic years 1986-87 and 1987-88.

Analysis.--When fall 1986 first-time freshmen in the public institutions are compared to fall 1987, there was an increase of 1,123 students. This fall-to-fall comparison of enrollments is the traditional methodology of measuring higher education. The National Center for Education Statistics and the Office for Civil Rights, for example, still rely on this measurement to evaluate the flow of incoming freshmen and college-going rates.

When the annual data is examined the results are somewhat different. The number of first-time freshmen in 1987-88 was 1,572 larger than in 1986-87. This was an increase of 3.9 percent. This is an example why caution should always be exercised in evaluating one type of data for a limited period of time.

Table 8: Five-Year Trend of First-Time Freshmen

Table 8 depicts a comparison of full-year enrollments for first-time freshmen annually from 1983-84 through 1987-88 by public institution and types of public institution. Although the increases have been uneven, the overall trend is up with two-thirds of the five-year increase found in the two-year institutions.

ENROLLMENTS

PART III

ENROLLMENTS

Table 9: Headcount Enrollment by Class Level

This table shows the total number of unduplicated individuals enrolled in 47 Oklahoma higher education institutions in 1987-88, distributed by class level and by sex. The reader should note that the number of unduplicated individuals enrolled in that year was 243,895, a number half again greater than the fall semester enrollment. In 1987-88, higher education directly affected 50 percent more people than were enrolled in the semester of highest enrollment. In 1987-88 roughly 7.3 percent of the Oklahoma population attended a college or university. This coupled with 18.5 percent of the population enrolled in elementary and secondary schools means that more than one in four Oklahomans was part of the education system in 1987-88.

Analysis.--The total headcount in 1986-87 was 240,498. This means the headcount in 1987-88 shows an increase from the previous year (1.4 percent). Females continued to outnumber males in 1987-88 by a ratio of 53 to 47. In 1962, twenty-four years ago, males outnumbered females in Oklahoma higher education by a ratio of 65 to 35. Fourteen years ago, in the fall of 1972, males outnumbered females by a ratio of 60 to 40. Thus the bulk of the change in the enrollment of women has taken place during the past decade. Public sector institutions enrolled 90 percent of the annual headcount in 1987-88 while the private institutions (exclusive of Oklahoma City University and Phillips University) enrolled a total of 10 percent of the headcount, up from a year ago.

Table 10: A Comparison of Headcount Enrollments

This table compares the 1986-87 unduplicated headcount enrollments at the public institutions to those in 1987-88 by semester and for the total academic year. In order to be included a student must have been enrolled, attended class, and paid fees as of the census date.

Analysis.--Semester by semester, the annual comparison is as follows. The summer was up by 2,023 students or 3.0 percent between 1986 and 1987. The fall semester shows an increase of 2,076 students or 1.4 percent between the two falls. The spring semester shows a loss of 190 students or less than one percent. The annual difference, however, shows an unduplicated headcount increase of 1,226 for 1987-88 over 1986-87. The bulk of this difference occurred at two, two-year institutions, Tulsa Junior College and Oklahoma City Community College. The 702 increase at Southwestern Oklahoma State University was due mainly to the incorporation of Sayre Junior College or a branch campus.

Table 11: Five-Year Comparison of Headcount Enrollments

This table compares annual unduplicated headcounts for the institutions for five years. An "annual headcount" aggregates each student into the total only once. They must have been enrolled at least one semester, attended class, and paid fees as of the census date.

Analysis.--Public sector enrollments on this table show an increase from 1983-84 to 1987-88. Changes in full-year unduplicated headcounts do not simply reflect a gain or loss of students, but may also signify a shift in enrollment patterns as well as retention.

Table 12: A Decade of Fall Headcount Enrollments

This table gives eleven years of fall headcount enrollments for the public institutions in the State System.

Analysis.--Between fall 1977 and fall 1987 headcount enrollments in the public institutions rose by 16.0 percent. Fall 1987 represents the second highest enrollment level for a semester in the decade, exceeded only by fall 1983.

Table 13: Enrollment by Division

This table distributes enrollments for 1987-88 by division of study (lower, upper, graduate, and professional), and presents enrollments using a common workload factor called full-time-equivalents. A full-time-equivalent undergraduate enrollment is calculated by dividing the figure 30 into the total number of student-credit-hours enrolled in by all undergraduate students. The rationale for the figure 30 is based on the fact that a full-

time undergraduate student ideally takes four years to complete a 120-hour degree program, which means that he or she must take 30 hours per year to be a full-time student. Full-time graduate students are required to take 12 credit hours per semester, or 24 semester-credit-hours per year. Therefore, the graduate and professional divisions use the value "24" to make the division into the credit hours. One graduate or professional FTE equals 24 annual semester hours.

Analysis.--In 1987-88, public institutions produced 113,633 full-time-equivalent workload units, based on an unduplicated headcount enrollment of 218,389. This means that in the same year that unduplicated headcount enrollment went up by 0.6 percent; the FTE workload went up by 1.7 percent.

By division of study, lower-division students produced 58.4 percent of the FTE enrollments in the State System, upper-division students produced 28.9 percent, graduate students produced 9.1 percent, and professional students the remaining 3.6 percent of the total during 1986-87. By division, the lower division produced .52 FTE per headcount, the upper division, .70, the graduate division, .40, and the professional division, 1.47.

Table 14: 1986-87 FTE Compared to 1987-88 FTE

This table compares the full-time-equivalent enrollments (FTE) in the public institutions in 1986-87 with the FTE in 1987-88 by semester and for the academic year.

Analysis.--Overall, 1987-88 shows a gain in FTE over 1986-87 by 812 or 0.7 percent. Gains for 1987-88 were posted in the summer and fall semesters. The 1.3 percent increase in FTE between years is consistent with the headcount increases for the same time period.

Table 15: A Five-Year Comparison of Annual Full-Time-Equivalent Enrollments

This table shows the five-year history with year-to-year comparisons of the annual FTE of all institutions.

Analysis.--In the public sector institutions the FTE enrollments were at their lowest in 1984-85 with a decline of 3.4 percent over the previous year as well as over 1982-83. Since 1984-85 FTE enrollments have gradually risen, 1987-88 FTE was 3.0 percent greater than the 1984-85 low.

Table 16: Student-Semester-Hours by Division

This table elaborates on the data presented in the previous tables by showing the number of student-credit-hours enrolled in by division. The division and class level of a student credit hour is defined by the level or division of the student enrolled in that semester. This should not be confused or mixed with information about course credit hours that are defined by the division or level of the course enrolled in.

Analysis.--Of the 3,318,492 total student-credit-hours enrolled in by all students in the public institutions in 1987-88, 1,947,283; or 58.7 percent, were based on lower-division courses. In comparison, 30.4 percent of the total student-credit-hours were based on upper-division courses, 8.3 percent on graduate courses, and 2.6 percent on courses taken at the professional level. At the lower division the two-year institutions accounted for 51.9 percent of the semester hours in 1987-88, compared to 52.4 percent in 1986-87; the comprehensive universities for 21.2 percent and the other four-year institutions for 26.4 percent. At the upper division the comprehensive universities accounted for 50.4 percent of the semester hours with the other four-year institutions producing 49.6 percent.

Table 17: Concurrent High School Enrollment

Table 17 contains data from 25 of the 27 public institutions authorized to concurrently enroll students in higher education who are still in high school but meet certain standards. These values are also contained within the other enrollment tables within this volume.

Analysis: In 1987-88, 962 high school students were reported by institutions to have been concurrently enrolled in at least one college course. These students enrolled for a total of 11,223 semester hours or 374 FTE in 1987-88. These students comprised 0.4 of one percent of the total unduplicated enrollment, and 0.3 of one percent of the total semester hours and total FTE. They, however, represent 0.6 percent of the semester hours at the lower division. Black students comprised 3.1 percent of the concurrent enrollments; Native Americans were 5.1 percent; Asians, 1.7 percent; Hispanics were 1.0 percent, and Whites were 89.0 percent. Women outnumber men at 65 percent to 35 percent.

DISTRIBUTION

PART IV

DISTRIBUTION

Table 18: Enrollment by Race, Sex, Class Level, and Full-Time/Part-Time

This table contains a distribution of students in the public colleges by race, sex, class level, and full-time/part-time status. In the fall of 1987, full-time students comprised 55.0 percent of the total headcount enrollment, and part-time students made up the remaining 45.0 percent. These distributions are relatively consistent with previous years.

Table 19: Unduplicated Headcount Student Enrollments by Public Institution for Fall 1987 by Race and Sex

Table 20: Unduplicated Headcount Student Enrollments by Public Institution for Fall 1987 by Race

Table 21: Percentage of Student Enrollment for Fall 1987 by Race Within the State System

Table 22: Percentage of Student Enrollment for Fall 1987 by Race Within the Institution

Analysis.--Table 19 distributes the fall 1987 student enrollments by race and sex for each institution. Table 20 combines the data in Table 19 into race totals. Table 21 computes percentages based on data in Table 20 for student enrollment by race within the institution, and Table 22 computes percentages based on data in Table 20 for student enrollment by race within the State System.

The enrollment of Nonresident Aliens continued to decline. Their enrollment level fell by 4.8 percent between fall 1986 and fall 1987. The year before the decline had be 8.6 percent. Black student enrollments increased by 107 students or 1.1 percent, going from 9,519 to 9,626. The reported enrollments for Native Americans increased from 6,666 to 6,906. Asian declined 1.0 percent from 2,443 to 2,419, while Hispanic enrollments rose by 4.8 percent from 1,873 to 1,963. White enrollments were up by 0.4 percent in fall 1987 over fall 1986.

Men outnumbered women in the Nonresident Alien enrollment. Men were 77 percent of the NRA enrollment and women 23 percent. In the Asian enrollments men were 61 to 39 percent for women. In the Hispanic enrollments men were 53 percent to women's 47

percent. In all other categories women outnumbered men. Men comprised 44 percent of the Black enrollments and women 56 percent. Native American women outnumber men with 57 percent of the enrollments to the men's 43 percent and White males constitute 46 percent of that enrollment compared to 54 percent for women. Overall, women held 53 percent of the total enrollments in fall 1987, up 1.0 percentage point over fall 1986. In fact in all categories except white, males consistently lost ground by one percentage point in 1987 over 1986.

Table 23: Public Enrollment by Program of Study and Class Level

This table breaks down the number of unduplicated headcount enrollments in the public colleges in 1987-88 by field of study and by class level. The table shows that Business Management remains the most popular field of study among students in the public sector. Some 34,405 students indicated that they were studying Business Management in 1987-88; in addition 12,870 students were studying Business Technology, making a grand total of 47,275 or 21.6 percent in business-related subjects. The second largest field of study was Education, with 28,214 students, or 12.9 percent of the total enrollment. Engineering and Engineering Technology combined was the third largest field with 8.5 percent of the total enrollment.

Table 24: Private Enrollment by Program of Study and Class Level

This table presents the same information by field of study for private colleges as the previous table presented for public institutions. As in the public sector, the field of Business Management and Technology attracted the greatest number of reported private students, 5,895, or 23.1 percent of the reported private-sector enrollment. Engineering and Engineering Technology combined was second in popularity, followed by Education.

Table 25: Public and Private Enrollments by Program of Study and Class Level

This table combines the data in the two previous tables, and presents a distribution of headcount enrollments for the 1987-88 year by program of study and by class level. The top five fields of study in that year were Business Management, Education, Business Technology, Engineering Technology, and Engineering, all professional and vocational fields.

Among them these top five programs attracted 106,125 or 43.5 percent of the 243,895 reported students reported in the reporting public and private colleges of Oklahoma in 1987-88.

Table 26: Public Institution Enrollment by Age, Sex, Race, and Class Level

This table distributes students enrolled in the State System by age, sex, and race.

Analysis.--The median age of State System students was 24 in fall 1987, with the modal group being the 20-24 age range. In percentage terms, 54.8 percent of the student body was 24 and under, and 45.2 percent was over 24. More than three-tenths of the total student body was more than 30 years of age in 1987-88.

Although women outnumbered men by a ratio of 51 to 49 in fall 1983, men outnumbered the women in every age category under 30 years of age. By fall 1987 this trend was reversed. Only in the 20-24 and the 25-29 year old group did men still outnumber women.

Tables 27, 28 and 29: Public Enrollment by County, State and Country

Tables 27, 28, and 29 show the geographic origins of students enrolled in Oklahoma higher education in fall 1987. Table 27 distributes those in the public sector, Table 28 those in the private sector, and Table 29 those in the public and private sectors combined.

Analysis.--In the public sector, 90.4 percent of the students in 1987-88 were from Oklahoma, 5.7 percent were from other states, and 3.3 percent came from 123 foreign countries and territories. Texas furnished the greatest number of students from states other than Oklahoma with 2,261, followed in order by Kansas with 593, California with 454, and Illinois with 421. Foreign countries sending the most students were Malaysia, 722; India, 352; and Pakistan, 337.

Among the private sector institutions, Oklahoma students outnumbered nonresident students 56 to 44 in 1987-88. Students from Oklahoma comprised 55.6 percent, students from other states, 39.4 percent, and students from other countries 5.0 percent of the total.

Figures 9 and 10: Geographic Origins and Distribution of Students in Oklahoma Public Higher Education, Fall 1987

These figures display the data found in Tables 27, 28, and 29 in a summary fashion.

STUDENT PROGRESSION

PART V

STUDENT PROGRESSION

Figure 11: Public Undergraduate Student Progression

This figure illustrates the progression of all undergraduate students classified by class level in the public institutions from the 1986-87 school year to the next fall enrollment. In this report summary, eight consequences are possible for each student. The following is a description of the figure moving in a clockwise direction. In the summer, fall, and spring enrollments for 1986-87 there were 116,860 unduplicated undergraduate classified students enrolled in regular programs at all class levels within the public institutions of the State System. Of the base-year students, 10.2 percent, or 11,922, completed their program by receiving either a certificate, associate degree, or bachelor's degree. Some 2.4 percent, or 2,767, of the base-year students who did not return are considered to be stopouts who will return at a later date. This "stopout factor" is a historical average of the number of re-enrollments within an institution after a delay of one semester or more. Some 1.9 percent of the students, or 2,199, advanced more than one class level and 25,689, or 22.0 percent, advanced to the next class level. Remaining at the class level they were in during the base year were 21.3 percent, or 24,919 students. In all 47.6 percent, or 55,574 students, remained at the same institution. Students who left the base-year institution totaled 42.2 percent, or 49,364. Of those who left, 10,337 students transferred immediately to another public institution within the state. The percentage counted as students who delayed their transfer to another institution to some future point in time totaled 6.9 percent. Finally, 26.5 percent, or 30,990 students, did not return. They either transferred to private institutions in Oklahoma, to out-of-state schools, or simply dropped out of college altogether.

Figure 12: The Intra-Institutional Progression of Unclassified Undergraduate Students in 1986-87 to Fall 1987

Unclassified students, often referred to as "special" students, numbered 46,732 in 1986-87. In fall 1987, 10,000, or 21.4 percent, of the unclassified students returned to an institution within the State System. In other words, only one in five "special" students

returned the next year. By definition these unclassified undergraduates are students enrolled for specific purposes other than seeking a degree.

Table 30: The Annual Undergraduate Progression Rates for the State System from 1986-87 to Fall 1987

This table displays the data in the SPR 13,000 B5 report on progression for each undergraduate class level at the public institutions. The rate of progression at all levels for the State System was 73 percent which corresponds to the data presented in Figure 11. The least progression occurred between the freshmen and sophomore years with 36 percent attrition rate. The attrition rate during the senior year dropped to 16 percent. In any given year, seven out of ten undergraduate students will have completed their course of study or will return the next year.

TRANSFER OF STUDENTS

PART VI

TRANSFER OF STUDENTS

Figure 13: Transfer Pattern of Students

This diagram depicts the data in Table 31 as two-year and four-year institutions' exchange of students. The percentage reflects those students reported by receiving institutions as transferring into the schools during fall 1987 with or without a degree. In fall 1987 exactly 49 percent of the transfer students went to four-year institutions and 51 percent went to two-year institutions. In fall 1986 the distribution was 50 percent and 50 percent, respectively. The origin of transfer students in fall 1987 differs in some degree from fall 1986. In fall 1986, 25 percent of the transfer students moved from two-year to four-year institutions. In fall 1987 the same movement was 31 percent. The "reverse flow" from four-year to two-year institutions was 40 percent in 1986, but was down to 33 percent in 1987. The two-year to two-year institution flow of transfer students rose eight percentage points from fall 1986 to 1987; from 10 to 18 percent of the total.

Data for five of the past six years have reflected the "reverse flow" from four-year to two-year institutions. Fall 1987 marked a net reverse flow of 426 students or about one-fourth the number of "reverse" flow students in fall 1986.

Table 31: Detailed Transfer of Students

This matrix depicts one semester's record of students with or without degrees transferring into a public institution during fall 1987. The receiving institution defines the student as a transfer and designates the school from which the student transferred. The contributing institutions are arrayed in the left-hand column and the receiving institutions are listed at the top. For example, in fall 1987, Table 31 shows 157 students transferring from the University of Oklahoma to Central State University and 160 students transferring from Central State University to the University of Oklahoma. The matrix contains students at all class levels and for all classifications. An expanded matrix by race, sex, with degree, without degree is available upon request.

FINANCIAL AID

PART VII

FINANCIAL AID

The OCR 13,000 B3 report from which the following data is derived is aggregate data produced by institutions. It is reasonable to assume that variance has been introduced into the types of data included in the reports and as to the classification of data within reports. With these caveats, the conclusions formed from the following tables or charts should be reflective and not definitive.

Figure 14: Distribution of Dollars

This figure shows the distribution of financial aid dollars by categories and subcategories for the 1986-87 reporting period.

Analysis.--Over half of the 35.7 percent awarded in grants were awards in just one program, the Pell Grant Program, formerly known as the Basic Educational Opportunity Grant. The Supplemental Educational Opportunity Grant accounted for 4.3 percent of all grants. Each recipient of an SEOG is also a recipient of a Pell grant, for the SEOG by design is a supplement to that grant. Vocational Rehabilitation accounted for 6.1 percent of the grants with all other grants being 32.0 percent. The "All Other" category is substantially composed of federal programs, with the exception of the State Regents' Fee Waivers.

Loans comprised 39.5 percent of all financial aid dollars in 1986-87, up 1.6 percentage points over 1985-86 and over 7 percentage points from three years ago. State Insured Loans (including those indirectly insured by the federal government), such as the Guaranteed Student Loan Program made up 62.8 percent of all loans down from 66.4 percent the previous year but almost even with two years before which was at 62.7 percent. The "Teacher's Loan Program," National Direct Student Loans, equaled 10.5 percent of all loans, down from 13.1 percent in 1985-86. Loans with direct federal insurance such as those for medical and other professional and graduate training comprised 17.4 percent, a 1.1 percentage point increase over last year. Institutional loans, usually short-term and of low dollar amount, made up 4.7 percent. The "All Other" category was usually a direct federal loan, such as from the Veterans Administration, and made up 5.4 percent.

Employment comprised 18.5 percent of all financial aid dollars reported by institutions in 1986-87, down from 19.9 percent last year and down 7.4 percentage points from 1983-84. The employment of students based on need is a significant element in the overall financial aid package. In Oklahoma, employment currently provides less than one-fifth of the financial aid dollars available to students; five years ago it provided one-fourth of the aid dollars.

Scholarships which equal 6.2 percent of the total awards are those awards to students based on skills and academic attainments. These are outright awards not requiring repayment either in service or cash, although they may be tied to the continuance of a performance standard. There are literally hundreds of subcategories of scholarships; in the B3 report they are treated as one group.

Table 32: Five-year History Enrollments Receiving Financial Aid

This table gives the unduplicated enrollments for five twelve-month periods divided by the unduplicated recipients for each category of financial aid during that year.

Analysis.--In 1982-83, 27.5 percent of all unduplicated student enrollments were in receipt of at least one form of financial aid. By 1986-87 this figure had risen to 33.3 percent; a movement of from just over one in four students receiving financial aid to one in three in just five years. All categories of aid saw an increase in unduplicated recipients during the half decade except employment. Grants went from 17.8 percent to 22.6 percent. Loans grew from 8.5 percent to 12.6 percent. Scholarships rose from 4.5 percent to 6.2 percent. Employment however stayed basically even with 8.6 percent in 1982-83 to 8.5 in 1986-87.

Table 33: Financial Aid by Institution

Table 33 expands the data for 1986-87 to each institution. Discounting OCOMS, which is an exclusively professional school, just five schools had more than half of their student body on financial aid at some point in the academic year. Nine schools reported less than 25 percent of their students on financial aid. Interestingly these findings seem to contradict the general impression that everyone who is enrolled in college is on financial aid.
